

AIR POLLUTION CONTROL EQUIPMENT

By using efficient components and thoughtful designs, Nacah Tech provides the right equipment for air pollution control applications especially difficult pollutants.

Choose Nacah Tech for solutions for difficult applications including:

- Particulate-laden off gas
- N-compound bearing gas
- Liquid condensate issues
- Varying heat content
- Overheating potential
- Batch processes
- Fluctuating flow rates
- “Sticky” contaminants
- Space constraints
- HAPs or VOCs
- Meet NO_x, SO_x, PM, DRE requirements

- Efficient methods for regulatory compliance
- Used in industrial processes which generate off-gases or VOCs, with or without PM
- Designed for new plant installations, renovations to existing processes, or retrofits
- Sustainable designs
- Energy conscious
- Balance initial cost with long-term operating cost benefits
- Work with fabricators as needed for domestic or international locations
- High or low flow rates
- Thermal oxidizers, scrubbers, waste heat boilers, baghouse, stacks, etc.
