# Press Release

## **Solutions for Fugitive or Process Odor Problems**

NacahTech provides custom-designed solutions for difficult air pollutants

**Pittsburgh, PA December 2, 2011:** Nacah Tech systems concentrate compounds from large “air” streams at a rate up to 500:1 and then combusts them at 99%+. The compounds are then destroyed in an extremely small thermal oxidizer with very little, if any auxiliary fuel or power needed. To solve the problems, complete systems are designed to include: collection fan, carbon adsorber, desorber, (concentrator) thermal oxidizer, preheater, and exhaust system. Compared to alternative systems, customers can gain lower weight, smaller footprint, lower installed cost, no residuals, higher concentration (500:1) and lower pressure drop (3”wc), with reduced operating costs and able to meet stringent air quality requirements.
